“Environment Awareness Event”

“National Forest Conservation Day”

As part of environmental awareness day we are celebrating National Forest Conservation Day. A forest has millions of species of flora and fauna living in a complex “ecological mix”, with natural nutrient cycling processes that cannot be restored by creating monoculture plantations, which is the strategy used to substitute the rich natural forest lost mainly due to human activities like encroachments and pollution.

Let's celebrate the World Forest Conservation Day to know the importance of forests and its role in maintaining our Earth in a healthy state.

Popular Lecture by Dr. RAHUL MUNGIKAR, Maharashtra State Biodiversity Board, Pune
